- (iii) During compaction have a particulars check on :
 - (A) Soil should be spread in uniform layers not exceeding 250mm loose compacted to 200mm.
 - (B) Moisture content at the time of compaction should be + 1 to 2% of OMC.
- (iv) Density of each layer not be checked before permitting subsequent layers.
- (v) Soil test to be conducted to check PI value, which should be less than 6%

2. PREPARATION OF SUB-GRADE :

Look into the following points while preparation the base prior to laying of sub grade.

- (iv) Rolling should start from low edges and progress gradually towards higher points. Each roller pass should overlap half the width of the earlier pass.
- (v) After rolling aggregate (ballast) apply screening (filler matter) in thin layers in operations at slow rate. The binding material should be dry and the objective should be to drive in as much binder as possible to fill up all the voids of the aggregate. Dry roll should be continued as the screenings are applied.
